Econo-Keys releases mobile keyboard with reverse-side touchpad

Austin, Texas – Econo-Keys strengthened its line of low-priced, hygienic keyboards with the addition of the EK-76-TP, an innovative mobile keyboard with a touchpad on the reverse side.

The first-of-its-kind keyboard provides the functionality of a full-sized touchpad integrated into an ultra-compact case ideal for mobility.

“What makes this keyboard so original and unlike anything on the market is the reverse-side touchpad,” spokesperson Halley Cade said. “The EK-76-TP can be easily flipped over to provide convenient touchpad access, or used from underneath while typing. It is perfect for customers who desire the user-friendliness of a touchpad, but need something ultra-portable.”

Like all Econo-Keys products, the EK-76-TP is fully sealed to IP67 standards, making it resistant to dirt, dust and water. Because it lacks the crevices found in standard desktop keyboards, it can be thoroughly disinfected with any hospital-grade cleaning agent and can endure routine harsh washes.

The EK-76-TP measures 8.91” x 3.54” x 0.38” has a Windows- and Linux-compatible USB interface. The keyboard has 76 keys, including 12 function keys.

The EK-76-TP is \$146 and is available for purchase on the Econo-Keys website. All Econo-Keys products are discounted 10 percent when purchased by credit card at www.Econo-Keys.com.
