Econo-Keys introduces backlit EKB-97-TP keyboard with touchpad

Austin, Texas – Because keyboards and mice can harbor nearly 70 times more germs per square inch than a toilet seat, the ability to effectively clean these commonly touched objects is crucial.

Econo-Keys specializes in completely sealed keyboards that can be fully disinfected to help curb the spread of dangerous hospital-acquired infections such as MRSA. This week, Econo-Keys introduced the EKB-97-TP keyboard to its diverse line of infection-control input devices.

The EKB-97-TP is the first backlit keyboard available from Econo-Keys. Lit by blue LED lighting, the keyboard is ideal for working in dimly lit areas such as labs and patient rooms.

The keyboard features an integrated touchpad with left- and right-click buttons and number pad, making it a compact, total solution for data input.

Like all Econo-Keys' products, the EKB-97-TP meets IP67 standards and can be thoroughly disinfected with any hospital-grade cleaning solution.

The EKB-97-TP is available for \$178. All Econo-Keys products are discounted 10 percent when purchased by credit card at www.Econo-Keys.com. Products may also be ordered by phone at 1-800-382-9678.
